French citizen with full right to work in the EU — no visa sponsorship needed. Also a Brazilian citizen.

PROFESSIONAL SUMMARY

Backend and full-stack software engineer focused on applied AI engineering: LLM agents, the Model Context Protocol (MCP), RAG and quality evaluation, built on enterprise backend systems (Accenture) and full-stack web development. I built and deployed Scout, a Claude agent with tools, guardrails and automated evaluations, with a public demo on GCP. Open to AI and software engineering roles, remote or on-site in the EU, for full-time, contract or freelance work. French citizen with full right to work in the EU — no visa sponsorship needed. Also a Brazilian citizen.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, C, C#, PL/SQL, Shell

AI / LLM: LLM integration & prompt systems, Model Context Protocol (MCP), agent & subagent design, Claude / Anthropic APIs, Machine Learning, NLP, scikit-learn, LightGBM, MLflow, pandas, NumPy

Web & Mobile: Next.js, React, React Native, Node.js, Expo, HTML/CSS, Bootstrap

Backend & Data: REST APIs, PostgreSQL, Oracle Database, Oracle BRM, Oracle BI Publisher

DevOps & Cloud: Docker, CI/CD (GitHub Actions), AWS EC2, Vercel

Tools: Git, pytest, JIRA, Figma, Sanity CMS

Methodologies: Agile / Scrum

LANGUAGES

Portuguese — Native
English — Fluent, C2 (EF SET 77/100)
French — Advanced, C1
Spanish — Intermediate, B1

PROFESSIONAL EXPERIENCE

Custom Software Engineer — Accenture Jun 2022 – Jun 2023
Campina Grande, Brazil

- Developed and maintained large-scale financial systems using Oracle BRM, Shell scripting, and C
- Optimized backend batch processes, improving performance and reliability
- Automated financial reporting through Oracle BI Publisher to support decision-making
- Delivered features on schedule inside an Agile/Scrum team using JIRA

Freelance / Independent Software Developer 2024 – present
Remote

- **LABNOV** (UFCG materials-research lab) — designed and built the bilingual (PT/EN) site from scratch: a Next.js frontend, a Sanity CMS content model for non-technical staff, and an automated publication-sync pipeline off Brazil's Plataforma Lattes, including a manual-assisted workaround for reCAPTCHA where full automation wasn't possible
- **Rogério Freire** (pop-art painter) — website showcasing his original paintings and a catalog of products made from them (mugs, pillows, notebooks, t-shirts), with purchase enquiries via WhatsApp and email; Next.js, Tailwind CSS, Vercel
- UI/UX prototyping in Figma through backend implementation in Python and Java for earlier client web and mobile projects

SELECTED PROJECTS

Scout — Football Market-Value Forecasting with an LLM Agent Live demo · github.com/simonrl13/footballscout

- Python, LightGBM, FastAPI, Postgres, Cloud Run. Trained on 8,190 players across seven European leagues; ~13% lower MAE than the no-change baseline; Claude agent with tool use, a number-checking guardrail and Wikipedia RAG with revision-level citations; 19/20 on a held-out eval; resisted 2/2 injection attempts

AI Portfolio Assistant — simonlaborde.com

- Live chat assistant on my portfolio, grounded in structured site content via the Claude API (Haiku); every answer is checked against the profile before it is shown
- Hardened for production: per-IP rate limits and a daily spending cap, CSP and security headers (grade A on securityheaders.com), prompt-injection tests, and CI with CodeQL and secret scanning

MedHelp — AI Clinical Decision Support

- Python NLP tool designed for Brazil's public health system (SUS), built and evaluated on synthetic data, not real patient records: normalizes clinical notes and recommends preventive exams from patient history
- 92% (23/25 terms, synthetic data) on clinical terminology normalization
- Undergraduate thesis (graded 10/10, the maximum grade): "MedHelp: Sistema de Apoio à Decisão Clínica para Recomendações de Exames Preventivos com Processamento de Linguagem Natural" [translation: "MedHelp: A Clinical Decision Support System for Preventive Exam Recommendations Using Natural Language Processing"]

NutriQuest — Gamified Nutrition Tracking App

- Mobile app (React Native / Expo) that gamifies meal logging with streaks, XP levels and weekly challenges, in Brazilian Portuguese; in development (redesign in progress)

EDUCATION

Bachelor's Degree in Information Systems — UNIFACISA 2020 – 2025

Campina Grande, Brazil

CERTIFICATIONS & TRAINING

Certifications

AI-900: Microsoft Azure AI Fundamentals — Microsoft

Scrum Fundamentals Certified (SFC)

EF SET English Certificate (C2, 77/100)

Training

Anthropic Academy — AI Fluency: Framework & Foundations (Mar 2026)

Anthropic Academy — Claude Code in Action (Mar 2026)

Anthropic Academy — Building with the Claude API (Jul 2026)

Anthropic Academy — Introduction to Model Context Protocol (Aug 2026)

Anthropic Academy — Model Context Protocol: Advanced Topics (Aug 2026)

Accenture Academy — Oracle BRM
